Putting your scrap on track

Case Scrap

We put our many years of experience in scrap transportation to good use for you

We design and develop customised transport solutions that meet the needs of the steel/recycling cycle. Not all scrap is the same!.

What we offer you

In accordance with the various types of scrap, our **scrap delivery management** coordinates transport volumes and delivery times, thus harmonising the demand from steel works with the supply from scrap suppliers.

Our **freight wagon fleet** has been designed to meet the stringent requirements associated with not only the market but the freight itself (e.g. robustness). We are continuously optimising our fleet (digital equipment, innovative wagon models, etc.) and enhancing it through the use of modular freight wagon systems.

We offer you **transport options** based on your particular needs (e.g. single wagonload transportation, block train concepts and hub systems) for the transportation of scrap to both national and international destinations.

Our **scrap portal** provides industry-oriented, digitalised mapping of all essential processes along the entire transport chain.

We implement projects that are **specifically tailored to your needs** and are based on innovative transport concepts and digital solutions that ensure smooth processing. Our goal is to work with you to improve performance and increase the use of rail transportation in a manner that is sustainable.
